REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the claims address a method of producing an X-ray CT image of a region-of-interest where either a derivative of the projection data is calculated with respect to the X-ray source trajectory, convolved with a kernel function, weighted, backprojected, and added to the reconstructed image (as required by independent claim 1), or the projection data set is filtered, weighted, and backprojected with a first filter and weight, and added to the image, then filtered, weighted, and backprojected using a second filter and weight, and added to the image (as required by independent claim 4). These features are neither shown nor fairly suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tam US 5,881,123 A shows Feldkamp reconstruction where one convolution replaces filtering and deriving, Tam US 6,292,525 B1 shows weighting and convolution, Ning, US 6,504,892 B1 shows derivation of the sinogram in the distance direction, and Wang *et al.* US 2003/0097063 A1 shows reconstruction with backprojected slices added together.
